Processing Rule of Thirds Photos: Sept 9, 2019

1. Create a New Folder on Desktop: "RuleofThirds_9_9"

2. Transfer photos to your desktop, place in "RuleofThirds_9_9"

3. Perform "Basic Color Corrections" for each photo: Image>Adjustments>Levels

4. Crop photos as needed to improve Rule of Thirds Composition.

5. **On paper**, write about the five Rule of Thirds photos (ignore the Breaking Rule of 3 images) using the two step method:

   Step 1: For each photo, answer the following questions with relevant details:

   1. **Who** or **what** is the subject of the photo?
   2. **When** was the photo taken?
   3. **Why** was this subject chosen for this assignment?
   4. **How** was this photo created?

Step 2:
Combine the answers to the five questions above into a written description of the photo and the process and circumstances under which the photo was taken. **You are now writing <u>a caption</u> for the photo.**

How to order your information: Begin by describing what the viewer can see (a subject is doing something). Then provide information that is not obvious or recognizable in the visuals of the photo itself.
